EDUCATION

The University of Texas at Tyler

Bachelor of Science in Computer Science, 3.5 GPA

Tyler, TX

Aug. 2020 – May 2024

EXPERIENCE

TechServ Engineering and Consulting, LTD.

Jan. 2025 – Jan. 2026

Engineering Technician

Tyler, TX

- Performed utility pole engineering analysis in Katapult, ensuring 100% compliance with NESC standards and technical requirements, which reduced rework requests and accelerated project approvals.
- Maintained a 99.94% design accuracy rate (exceeding company standards) based on internal QA reviews, minimizing costly redesigns and boosting customer satisfaction through quality deliverables.
- Collaborated in a team environment, expressing strong communication skills to clarify project specifications, aligning quality and production goals that improved delivery efficiency and reduced design errors.

Quantum Interface, LLC.

Jan. 2024 – Jan. 2025

Software Engineer Intern

Austin, TX (Remote)

- Developed an interactive Unity application in C#, delivering a functional prototype that mirrored production-quality standards and demonstrated features to the team.
- Documented code and processes via Asana, ensuring maintainability and knowledge transfer within the team.
- Debugged and resolved performance issues in Visual Studio, applying troubleshooting and technical analysis.
- Participated in Daily Stand-ups via Microsoft Teams to provide quick status updates and potential roadblocks.
- Contributed to software engineering best practices and engineering standards through collaborative code reviews.

PROJECTS

PayPenguin | React, Node.js, Express, PostgreSQL, Prisma ORM, Passport.js, Supabase, Vercel July 2025 – Present

- Built a full stack bill tracking application with a React frontend and REST API backend, implementing JWT-based authentication with Passport.js and bcrypt password hashing
- Architected RESTful API routes following MVC pattern with separate routers and controllers, tested with Insomnia, implementing custom JWT middleware for route protection and ownership validation
- Migrated frontend state management from localStorage to a live REST API, integrating React Context for global auth and bill state across components
- Deployed frontend and backend as separate projects on Vercel with environment-based configuration and production CORS handling

VaultDrive | Node.js, Express, PostgreSQL, Prisma ORM, Passport.js, Supabase, EJS

Feb. 2026 – Mar. 2026

- Built a full stack file storage application deployed to Railway with secure session-based authentication using Passport.js and bcrypt password hashing.
- Implemented file upload pipeline using Multer and Supabase Storage with file type and size validation.
- Designed and queried a relational PostgreSQL database using Prisma ORM with cascading relationships between users, folders, and files.
- Built full CRUD functionality for folder and file management including moving files between folders.

PixelStrike Game | Unity Engine, C#, Photon Unity Networking, Git

May 2024 – June 2024

- Developed a multiplayer game in Unity/C#, implementing core systems that support smooth online play.
- Integrated Photon Unity Networking (PUN2) to manage real-time server-client communications for up to 8 concurrent players with minimal latency.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), SQL, C#, Python

Frontend: React, Next.js, Tailwind CSS, Material-UI, Framer Motion

Backend & Databases: Node.js, Express, Passport.js, Prisma ORM, PostgreSQL, EJS, Supabase

Developer Tools & Testing: Git, Prisma ORM, Jest, Vitest, Vite, Webpack, npm, Chrome DevTools, Linux, Vercel, UNIX command line, Insomnia, Postman

Technical Methodologies: Object-Oriented Design (OOD), Test-Driven Development (TDD), Agile (Scrum, Kanban), Data Modeling
